

Weekly Internship Report

Name: Muhammad Fahad Saleem

Position: AI Specialist Intern

Week: 1

Overview

During the first week of my internship, I learned the fundamentals of Python project structure, version control using Git and GitHub, and basic API development using Flask. I also set up my development environment and practiced working with REST API endpoints.

Tasks Completed

1. Development Environment Setup

- ✧ Installed Python 3.13
- ✧ Verified pip installation
- ✧ Installed Flask framework
- ✧ Created project folders and files for daily tasks

2. Git and GitHub Practice

- ✧ Initialized a local Git repository
- ✧ Learned basic Git commands:
 - git init
 - git status
 - git add
 - git commit
 - git push
- ✧ Created a GitHub repository
- ✧ Successfully pushed project files to GitHub

3. Python Practice

- ✧ Worked with variables, lists, and dictionaries
- ✧ Practiced accessing and displaying data
- ✧ Learned how data structures are used in applications

4. REST API Development

Using Flask, I created a simple REST API.

Endpoint Created

GET /posts

This endpoint returns stored forum posts in JSON format.

Example data:

- ✧ AI Agents – Author: Subhan
- ✧ Python Basics – Author: Afaq

5. Additional Learning

- ✧ Learned the difference between GET and POST requests
- ✧ Understood how client-server communication works
- ✧ Practiced creating routes in Flask
- ✧ Implemented an endpoint to retrieve a post by ID
- ✧ Explored API testing using Postman

Challenges Faced

- ✧ Understanding Flask routes and HTTP methods
- ✧ Learning how API requests and responses work
- ✧ Configuring Git and GitHub for the first time

Outcome

By the end of Week 1, I successfully built a working REST API, managed code using Git and GitHub, and gained a strong understanding of basic backend development concepts.

Conclusion

Week 1 provided a solid foundation in Python, Git, GitHub, and REST API development. The knowledge gained during this week will be helpful for upcoming AI and backend-related tasks in the internship.
