EDUCATION

2021- 2023

BASE COLLEGE WAH CANTT

- FCS

2023 - Present

UNIVERSITY OF HARIPUR

- Bachelor of Software Engineering

SKILLS

- Python
- C++
- Flask (Basic)
- SQL Lite (Basic)
- MS Office

LANGUAGES

- Urdu
- English (Inter Level)

ABOUT ME

Software Engineering student at the University of Haripur with a strong foundation in Python and C++. Experienced in developing functional applications, including backend systems using Flask. Passionate about problem solving and continuously improving technical skills to grow as a software engineer.

WORK EXPERIENCE

Backend Developer Intern (Remote)

- Developed backend features for an e-commerce web application using Python (Flask) and SQLite
- Implemented product management, cart functionality, and user authentication
- Worked with database operations and improved application logic for better performance

PROJECTS

Auto Reply Chatbot (Personal Project)

- Built a Python-based automation tool integrating OpenAI API to generate AI-driven chat responses
- Automated chat extraction and message sending using PyAutoGUI and Pyperclip
- Implemented end-to-end workflow for capturing, processing, and responding to chats in real-time

Weather Tracking System (University Semester Project)

- Developed a Weather Tracking System using Python and Tkinter with a GUI to manage weather records
- Implemented features to add, search, display, and delete records using data structures (lists and dictionaries)
- Added temperature analysis functions including maximum, minimum, and average temperature calculation

E-commerce Website (Internship Project)

- Developed backend of an e-commerce system using Python (Flask) and SQLite database
- Implemented core functionalities including product management, cart operations, and user authentication
- Designed server-side logic and database handling for efficient data processing
